

(c) defining a general purpose network presentation including data representative of the fetal condition signal;

(d) transmitting the presentation to a general purpose display station via a configurable network link upon receipt of a command from the display station, wherein the display station includes a general purpose computer and a browser operating to display the network presentation;

(e) updating the presentation to include updated data representative of the fetal condition; and

(f) retransmitting the presentation to the general purpose display station.

*Subj* 28. (Twice Amended) A system for monitoring a fetal condition, the system comprising:

means for detecting a fetal parameter of interest and for generating a fetal condition signal representative thereof;

means for storing the fetal condition signal;

means for defining a general purpose network presentation including data representative of the fetal condition signal;

means for transmitting the presentation to a general purpose display station via a configurable network link upon receipt of a command from the display station, wherein the display station comprises a general purpose computer and a browser that operates to display the network presentation; and

means for updating the presentation to include updated data representative of the fetal condition.
